Annual Report of

Collaborative Research Program

National Center for Food Safety & Technology

Illinois Institute of Technology

Confidential Information
Not for Publication
The National Center for Food Safety and Technology is funded, in part, by a Cooperative Agreement with the Center for Food Safety and Applied Nutrition of the U.S. Food and Drug Administration, Department of Health and Human Services.
TABLE OF CONTENTS

BIOTECHNOLOGY REPORTS

The Biotechnology Information for Food Safety Database .......................................................... 1
Stability to Digestion and Food Processing as Criteria for Protein Allergenicity Assessment .................................................. 5
Recovery of Listeria monocytogenes from Environmental Swabs .................................................. 11
Behavior of Non-Traditional Pathogens in Foods ................................................................. 15
Evaluation of Pre-concentration, Automated Immunomagnetic Separation and Real-Time PCR for Same-Day Identification of Pathogens from Complex Food Matrices .......................................................................................... 19

FOOD SAFETY/HACCP REPORTS

Microwave Pasteurization of Shell Eggs ................................................................................... II .... 1
Evaluation of Whether a Digoxigenin-Labeled Enzyme-Linked Immunosorbent Assay (DIG-ELISA) Specifically Designed to Detect Clostridium botulinum Neurotoxin in Media Can Be Utilized to Detect Botulinum toxin in Foods ................................................................. II .... 5
Online Clostridium botulinum Bibliographic Database ............................................................ III .... 11
Effect of Medium and Incubation Conditions on Recovery of injured C. botulinum Spores .................................................................................................................. III .... 15

PACKAGING

Ultrasonic Imaging as an Alternative to the Inspection of Seal Quality and Imperfections in Hermetically Sealed Containers for Low-Acid Canned Foods (LACF) .................................................................................. III .... 1
Gamma Irradiation of yellow and blue colorants in polystyrene Packaging Materials ................ III .... 7

PROCESSING

Incidence of Escherichia coli O157:H7 in Raw Milk and Survival of a Five Strain Cocktail of E. coli O157:H7 During the 60 Days Aging Period of Hard Cheese Made from Unpasteurized Milk ........................................................................................................ IV .... 1
Effects of Cleaning on Removal of Allergens from Food-Contact Surfaces ................................ IV .... 5
Effects of Consumer Food Preparation on Acrylamide Formation ........................................ IV .... 13
Thermal Resistance of Non-Traditional Microbial Agents ...................................................... IV .... 23
Acrylamide Content of Home Prepared Foods ........................................................................ IV .... 27

EXTERNAL PROJECTS

Shelf Stable Egg-Based Products Processed by Ultra High Pressure Technology ................ V .... 1
Control of Listeria monocytogenes in Processed Meats: A Combination of Physical Chemical, and Biological Interventions .................................................................................. V .... 5
