TABLE OF CONTENTS

5 Introduction

PROFICIENCY TESTING

- 7 Method Development for Vitamins A and D Analysis in Milk Products with Single Laboratory Validation
- 11 Survival of Bacteria in Foods During Freeze Drying and Subsequent Long-Term Storage for Use as Proficiency Testing Samples

NUTRITION

- 17 Detection and Characterization of Strawberry Polyphenols in Human Plasma after Ingestion of a Strawberry Drink at Four Dose Levels
- 26 Effect of High Pressure Processing and Milk on the Anthocyanin Composition and Antioxidant Capacity of Strawberry-Based Beverages
- 37 Berry Fruits Modulated Endothelial Cell Function via Phosphoinositide-3-Kinase/Protein Kinase B Pathway *In Vitro* in Endothelial Cells

FOOD CHEMISTRY

- 50 Development and Validation of Analytical Methods for Chemical Food Safety Hazards
- 60 *In Vitro* Cellular Assays for Assessing the Impact of Processing on Food Allergenicity
- 64 Impact of Processing on Food Allergens
- 70 Methods for Authentication of Food Ingredients and Detection of Chemical Adulterants
- 77 Cleaning and Validation to Prevent Allergen Cross-Contact

PROCESSING AND PACKAGING

- 91 Decontamination of Dry Ingredients
- 103 Determination of Organic and Inorganic Chemicals Released from Polymer-Clay Nanocomposite Food Packaging
- 108 Use of Nanofluids to Remove *E. coli* O157:H7 Contamination from Food-Contact Surfaces
- 110 Validation of Microwave Pasteurization of Multiple Shell Eggs
- 114 Effects of Sanitizers and Processing on Viral and Bacterial Pathogens
- 119 Migration Database of Additives and Contaminants in Food Packaging Systems for Use in Predictive Models
- 126 Inhibitory Growth Boundary Conditions for *Clostridium botulinum*
- 128 Inactivation of *Clostridium botulinum* Spores Using High Pressure Processing

continued on following page

- 132 Thermal Resistance of *Coxiella burnetii* in Dairy Products with Differing Levels of Solids and Fat Contents
- 138 Effect of High Pressure Processing on Migration Characteristics in Flexible Packaging Materials
- 145 Evaluation of a Non-destructive High Voltage Technique for the Detection of Pinholes in Semi-Rigid Packages for Foods

MICROBIOLOGY

- 152 Indicator Methods to Evaluate Process Controls for Fresh Produce
- 160 Analysis of Gene Function in *Escherichia coli* O157:H7 from Outbreaks Associated with Fresh Produce
- 166 Evaluation of Risk Management Options to Reduce Microbial Hazards in Sprouts through Quantitative Risk Assessment
- 170 A Systems Approach to Minimize *Escherichia coli* O157:H7 Food Safety Hazards Associated with Fresh and Fresh-cut Leafy Greens
- 183 Best Practices for Cleaning and Sanitation of Nut Processing Equipment
- 191 Production and Sanitation of Botanicals/Spices Used as Food Supplements
- 196 Investigation of Norovirus Cross-Contamination During Foodservice Procedures Used in the Preparation of Fresh Produce
- 201 Genomic Analysis of *Clostridium botulinum*
- 203 Effect of Temperature on HAV and MS2 Coliphage on Inoculated Produce
- 208 The Effect of Temperature History on the Ability of Proteolytic Strains of *Clostridium botulinum* to Produce Toxin in Extended Shelf-life Foods
- 216 Sample Preparation for Detection of Viruses on Fresh Produce
- 221 Comparative Genomic Analysis of *Listeria monocytogenes* for Survival in Food Processing Environments

INTRODUCTION

The Annual Review of Research contains reports on collaborative research conducted at the Institute for Food Safety and Health's (IFSH) National Center for Food Safety and Technology (NCFST) during the fiscal year 2011 (October 1, 2010 through September 30, 2011).

In 2011, NCFST became a principal operating unit within the newly formed IFSH at the Illinois Institute of Technology (IIT). The reclassification of the long-time food safety, defense and nutrition research center to institute status better reflects the organization's expanded scope of research, expertise and new state-of-the-art facilities available to its food industry members and government partners. NCFST continues to operate under its long-time cooperative agreement between IIT and FDA, focusing on design and performance of a variety of collaborative and cooperative research projects across five science platforms: microbiology, food chemistry, processing and packaging, nutrition, and proficiency testing.

NCFST was established in 1988 to bring together scientists from industry, academia and the US Food and Drug Administration (FDA) to work collaboratively on food safety issues. The center is a unique food research consortium of FDA's Center for Food Safety and Applied Nutrition, IIT and the food industry. The science conducted at the center forms a foundation for regulatory policy and establishes the parameters to ensure the effectiveness of food processing and packaging technologies. Industry benefits from the clearly established criteria for evaluating new processes and from a clearer understanding of how regulatory policy is established. FDA benefits from the scientific contributions of industry, and consumers benefit from improved processing and packaging systems that help assure food safety.
